Amendments to the Claims

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims

(Currently Amended) An embolic protection sheath, comprising:
 an elongate shaft having a proximal end and a distal end, and a lumen extending

an elongate shart naving a proximal end and a distal end, and a fument extending therethrough;

a coil assembly including a first coil and a second coil defining a lumen, the first coil defining a lumen and being wound in a first direction; the [[and]] second coil being wound in a second direction, the second coil being and disposed around the about an outer surface of the first coil; and

wherein the coil assembly is <u>disposed about at least a portion of attached to</u> the distal end of the shaft, and the lumen of the shaft is fluid communication with the lumen of the first coil.

- 2. (Original) The sheath in accordance with claim 1, wherein the first coil is multifilar.
- (Original) The sheath in accordance with claim 1, wherein the second coil is multifilar.
- 4. (Original) The sheath in accordance with claim 1, wherein the first and second coils are multifilar.
- (Original) The sheath in accordance with claim 1, wherein the first coil includes a wire having a circular cross section.
- (Original) The sheath in accordance with claim 1, wherein the second coil includes a wire having a circular cross section.

- (Original) The sheath in accordance with claim 1, wherein the first and second coils including wires having circular cross sections.
- (Original) The sheath in accordance with claim 1, wherein the first coil includes a wire having a generally rectangular cross section.
- (Original) The sheath in accordance with claim 1, wherein the second coil includes a wire having a generally rectangular cross section.
- 10. (Original) The sheath in accordance with claim 1, wherein the first and second coils include wires having generally rectangular cross sections.
- (Original) The sheath in accordance with claim 1, wherein the coil assembly includes a proximal taper.
- 12. (Original) The sheath in accordance with claim 1, wherein the coil assembly is coated with a polymer.
- 13. (Original) The sheath in accordance with claim 1, wherein the coil assembly is heat bonded to the shaft.
- 14. (Original) The sheath in accordance with claim 1, wherein the first coil includes a polymer coated wire.
- (Original) The sheath in accordance with claim 1, wherein the second coil includes a polymer coated wire.
- (Currently Amended) An embolic protection sheath, comprising:

 an elongate shaft having a proximal end and a distal end, and a lumen extending therethrough;

a coil assembly including a first coil and a second coil, the first coil defining a lumen, the first coil and being wound in a first direction, the [[and]] second coil being wound in a second direction, the second coil being and disposed about an outer surface of around the first coil:

wherein the coil assembly is <u>disposed about at least a portion of attached to</u> the distal end of the shaft, and the lumen of the shaft is fluid communication with the lumen of the first coil; and

an embolic protection device including an elongate wire and a filter attached thereto, wherein the wire is disposed at least in part in the shaft lumen.

- 17. (Original) The sheath in accordance with claim 16, wherein the first coil is multifilar
- (Original) The sheath in accordance with claim 16, wherein the second coil is multifilar.
- (Original) The sheath in accordance with claim 16, wherein the first and second coils are multifilar.
- 20. (Original) The sheath in accordance with claim 16, wherein the first coil includes a wire having a circular cross section.
- (Original) The sheath in accordance with claim 16, wherein the second coil includes a wire having a circular cross section.
- 22. (Original) The sheath in accordance with claim 16, wherein the first and second coils including wires having circular cross sections.
- 23. (Original) The sheath in accordance with claim 16, wherein the first coil includes a wire having a generally rectangular cross section.

- 24. (Original) The sheath in accordance with claim 16, wherein the second coil includes a wire having a generally rectangular cross section.
- 25. (Original) The sheath in accordance with claim 16, wherein the first and second coils include wires having generally rectangular cross sections.
- 26. (Original) The sheath in accordance with claim 16, wherein the coil assembly includes a proximal taper.
- 27. (Original) The sheath in accordance with claim 16, wherein the coil assembly is coated with a polymer.
- 28. (Original) The sheath in accordance with claim 16, wherein the coil assembly is heat bonded to the shaft.
- (Original) The sheath in accordance with claim 16, wherein the first coil includes a polymer coated wire.
- 30. (Original) The sheath in accordance with claim 16, wherein the second coil includes a polymer coated wire.
- 31. (Currently Amended) An embolic protection sheath, comprising:

a coil assembly including a first coil and a second coil, the first coil defining a lumen, the first coil and being wound in a first direction, the [[and]] second coil being wound in a second direction, the second coil being and disposed about an outer surface of around the first coil;

wherein the coil assembly is attached to and disposed about at least a portion of the distal end of the shaft, and the lumen of the shaft is fluid communication with the lumen of the first coil: and

an embolic protection device including an elongate wire and a filter attached thereto, wherein the wire is disposed at least in part in the shaft lumen.

- 32. (Original) The sheath in accordance with claim 31, wherein the first coil is multifilar.
- (Original) The sheath in accordance with claim 31, wherein the second coil is multifilar.
- (Original) The sheath in accordance with claim 31, wherein the first and second coils are multifilar.
- 35. (Original) The sheath in accordance with claim 31, wherein the first coil includes a wire having a circular cross section.
- 36. (Original) The sheath in accordance with claim 31, wherein the second coil includes a wire having a circular cross section.
- 37. (Original) The sheath in accordance with claim 31, wherein the first and second coils including wires having circular cross sections.
- 38. (Original) The sheath in accordance with claim 31, wherein the first coil includes a wire having a generally rectangular cross section.
- 39. (Original) The sheath in accordance with claim 31, wherein the second coil includes a wire having a generally rectangular cross section.
- 40. (Original) The sheath in accordance with claim 31, wherein the first and second coils include wires having generally rectangular cross sections.
- 41. (Original) The assembly in accordance with claim 31, wherein the coil assembly includes a first diameter section and a second diameter section having a diameter greater than the first diameter section.

- 42. (Original) The sheath in accordance with claim 31, wherein the coil assembly is coated with a polymer.
- 43. (Original) The sheath in accordance with claim 31, wherein the first coil includes a polymer coated wire.
- 44. (Original) The sheath in accordance with claim 31, wherein the second coil includes a polymer coated wire.
